

Jyoti is an accomplished business leader in the Healthcare Technology industry, with a proven track record of delivering profitable business growth and market share gain. She is currently the General Manager for Primary Care Ultrasound in GE Healthcare, with a mission to enable access to cost-effective and high quality healthcare globally. She has led multiple business units in GE Healthcare over the course of her 19 year career in the company, providing strategic vision and leadership to diverse engineering, marketing, product mgmt., clinical, supply chain, sales and cross functional teams, across all aspects of a wing to wing product lifecycle.

With her teams, Jyoti has been at the helm of developing and launching innovative and impactful products and technologies over the last decade, notably in anesthesia, patient monitoring , infant care and Ultrasound product lines. Of note is the recent launch of GE's innovative Handheld Ultrasound product, with the bold vision of transforming the physical exam with personalized care and immediate visualization in the pockets of clinicians world wide. Over her tenure in GE, Jyoti has also built expertise in working with healthcare professionals, governments, ministries of health, societies & healthcare associations, in multiple Low and Middle Income countries, enabling both access to technology and business model innovation towards development of sustainable, accessible and affordable healthcare infrastructure.

Jyoti is passionate about mentoring women in technology and has had many leadership roles in GE's women's network over the years, shaping the culture of diversity. She has been actively engaged with the Society of Women Engineers and Grace Hopper with a focus on Women in technology and business. She is currently on the board of an Ultrasound technology company.

Jyoti has a Postgraduation in Management from the Indian Institute of Management, Bangalore and an Engineering degree from BITS Pilani, India.
